

How to export .p12 key from Keychain

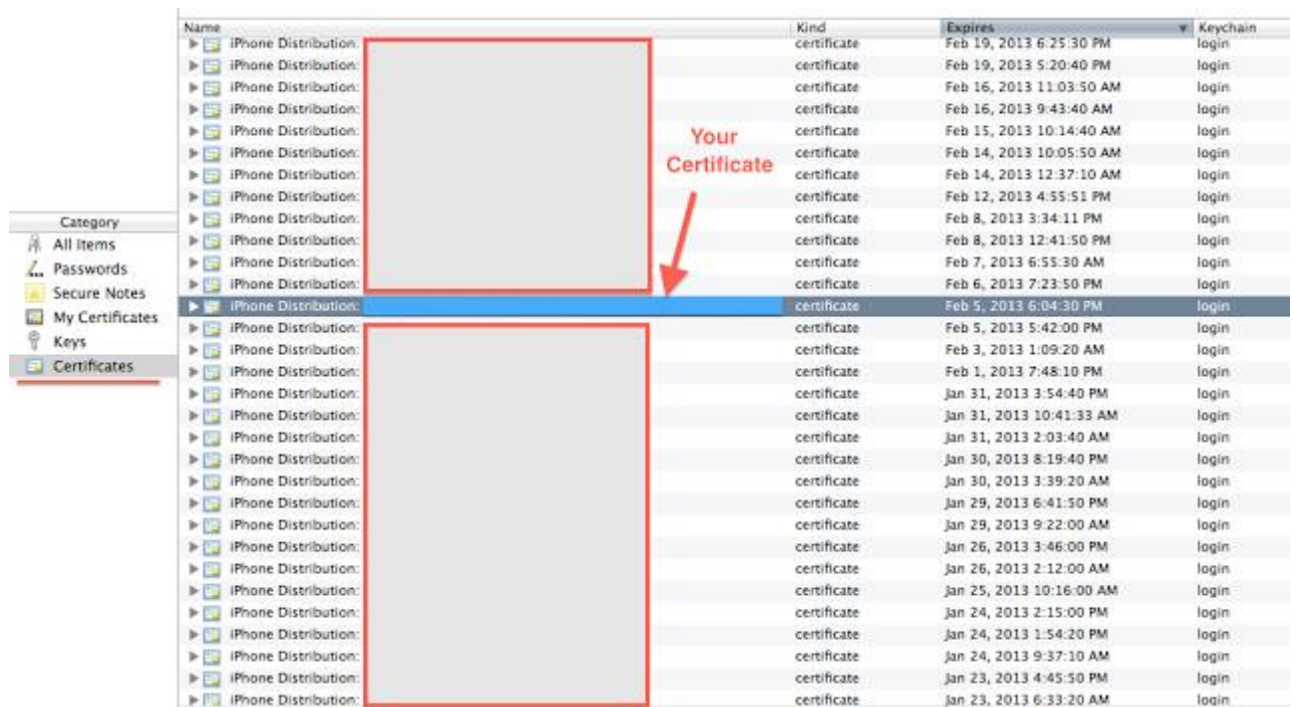

If **Distribution Certificate** you have provided us with was created with disregard to our guidelines in order to be able to complete building the binary for your app we need your private key (**.p12 file with password**).

Here are four easy steps that will guide you through fixing this, please follow them to export us your private key.

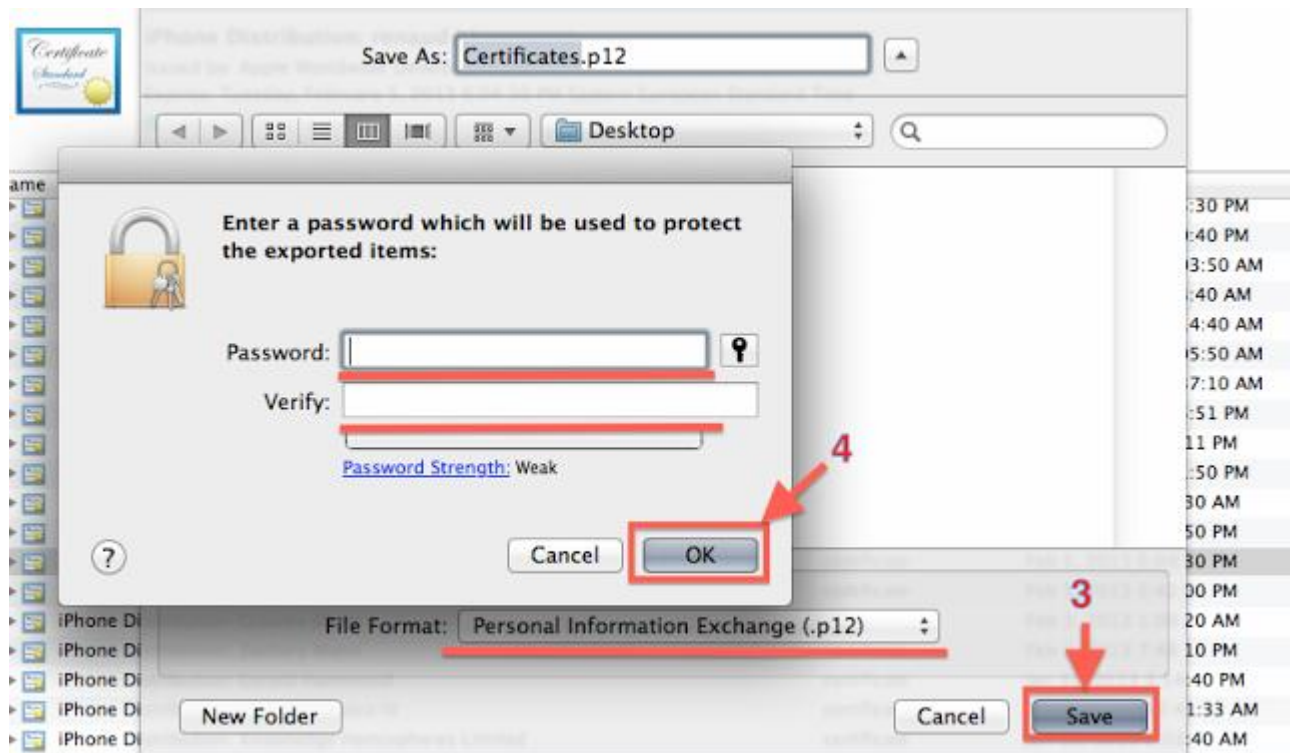

1. Open up the Keychain Access Application and select the Certificates category.

2. Find your iPhone Distribution Certificate in Keychain, right click on it and choose **Export** option in the appeared menu (or use $\text{⌘} + \text{SHIFT} + \text{E}$ keyboard shortcut to export your key).

3. Save your private key in the Personal Information Exchange (**.p12**) file format.

4. Enter and verify the password.

If for any reason you are unable to follow these steps, you may consider allowing our team to revoke and recreate your Distribution Certificate. This would have no side effects to you.
