

## IMG Menu page type tutorial

The below tutorial will bring you some basic tips on how to interact with the IMG Menu page type.

IMG MENU - displays a list of items with thumbnail images.

- 1) Go to your app's dashboard and access the Edit Pages section.
- 2) Click on Add New Page button (plus "+" sign) and select the IMG Menu from the list.
- 3) Create the page and then click on "Edit" button right next to the page type.

Here you are able to start editing the IMG menu page by re-naming it, adding or removing the header/footer images. You may also change the number of items per row.

Add as many items you need and start customizing them.

Once an menu item/image is created you may add a .png file to it and show a target page/ Link-to page (it is a must for the item's functionality). Upload the images to the resource manager and use them for each menu item.

Top banner: AdMob iAd None

Images / row :

Header Image:

Footer Image:

To add a new image click "+" button below the list. To delete an image, select it and click "-" button.

For selected item above you can change its image and link.

Once ready with editing the IMG menu page click "Save" button to save the changes.
