

Purchase

Purchase type page represents an advanced alternative to the buy:// scheme used in SC to link to In-App Purchase products within your app.

Parameters used for the buy:// scheme are hardcoded with specific handlers hosted on SC website. Using Purchase page offers the users possibility to manage by themselves the server side (database), editing the parameters listed below:

Edit Purchase Page

This is a Purchase page. To convert this page to a different type click [Convert](#).

NOTE: The page displayed in simulator on the left is for illustration purposes only. It is just an image and there are no clickable areas. To test this page please use [SeattleClouds app](#).

In-App Purchase Product ID from iTunes Connect (required):

1

Page (or URL) to open if transaction successful (required):

2

External URL to request to register transaction (optional):

3

If Cancel is pressed, Page (or URL) will be opened (optional):

4

External URL to request to notify about transaction (optional):

5

Product ID:

1) ID of the In-App Purchase product created on iTunes Connect (tutorial available at <http://seattleclouds.com/IAP>).

In-App Purchase ID example: com.myinappurchase.myappname

2) Page (or URL) to open if transaction successful (required) - link to the page containing the content of the InAppPurchase product (the page user will be redirected after paying). It can be internal URL or external.

- 3) **External URL to request to register transaction (optional)** - link to an **external** URL where user may register the transaction in a database information (e.g. product ID, device ID, status of payment, etc.).
- 4) **If Cancel is pressed, Page (or URL) will be opened (optional)**: link to a Page or External URL (user will be redirected to if canceling purchase).
- 5) **External URL to request to notify about transaction (optional)**: link to an external URL to a handler emailing to the user a purchase confirmation message, etc.
