

## QR Code List

QRCode list page types allows for scanning a number of qr codes which are stored as a list can be sent by email.

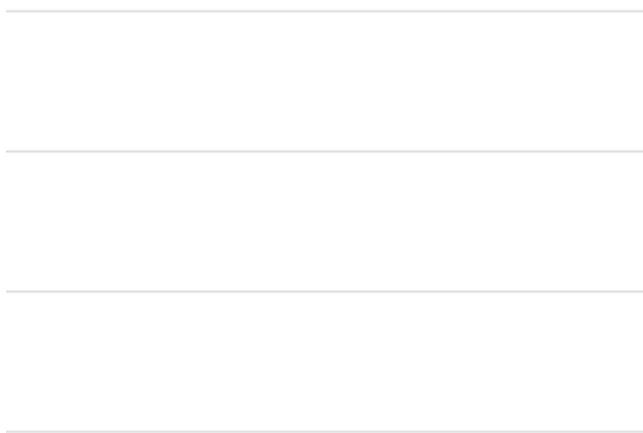

The only setting for this page is the email account of the addressee which can can be preconfigured.

The image shows two views of the QR Code List page editor. On the left is an iPhone simulator showing a dark header with the text "List" and a "+" button. A circular badge in the top left corner says "EDIT MODE" and "click on iPhone to edit". On the right is a desktop view of the "Edit QRCode list Page" interface. It features a QR code icon and the text "qrcodelist.html". Below this is a message: "This is QRCode list page. To convert this page to a different type click [Convert](#)." There are two buttons: a green "Save" button and a grey "Done" button. A section titled "QRCode list Properties" contains an "Email:" label followed by an empty text input field, which is highlighted with a red border. A note at the bottom states: "NOTE: The page displayed in iPhone simulator on the left is for illustration purposes ONLY. It is just a combination of images and there are NO clickable areas. Please test this page through [SeattleClouds app](#)."

The QRCode list page can only be previewed on device.

To start a new list tap on + button.

To proceed with scanning a code tap on Scan button.  
To cancel (return to list) tap on QRCodeList button.

---

If you want to scan the QR code please tap on the button "Scan".

Once you tapped the Scan button place device next to the QR code and view it on screen. Capturing of the code is performed automatically, as soon as camera focuses the image. Under the QR code image will be displayed the QR code data.  
To add this item to list tap on Use button.

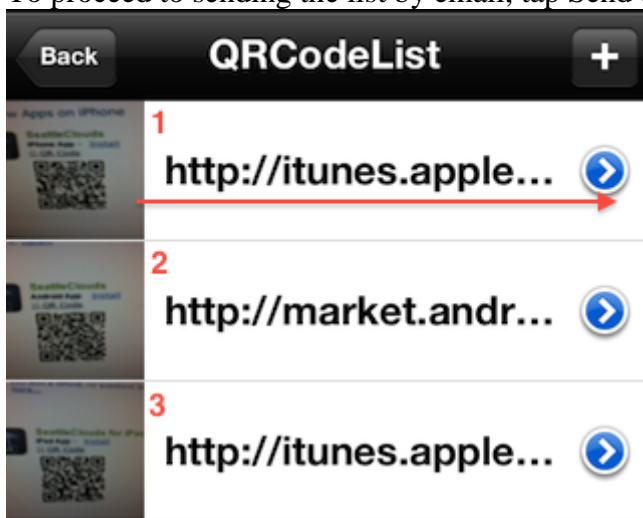

To proceed to next code tap on Scan button, capture QR code, add to list.

Upon completing scanning tap on QRCodeList button to view the list.

Each list item contains a QR code image capture and the QR code data (which can be viewed in a separate screen).

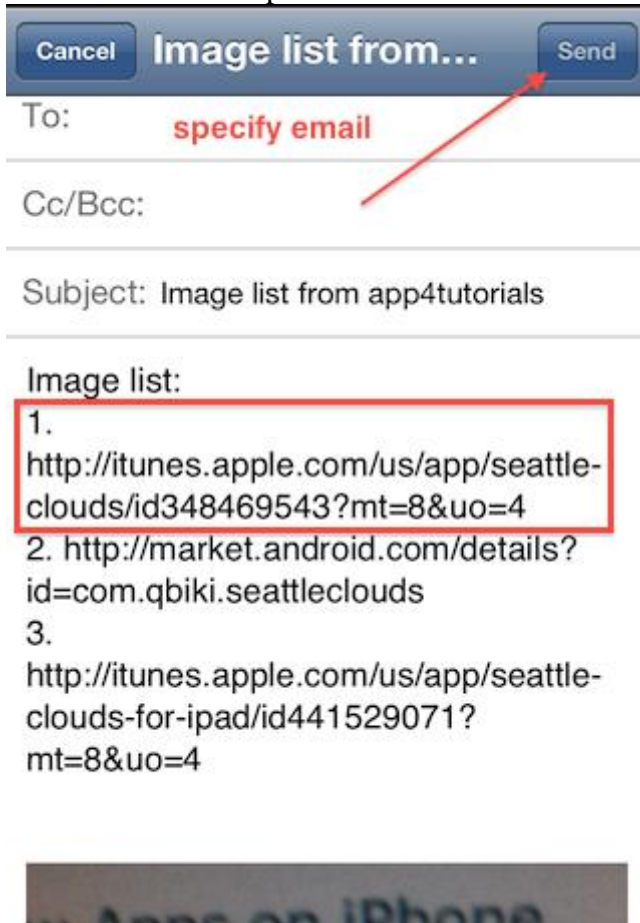

To proceed to sending the list by email, tap Send button.

In the Mail app you can add/edit the email accounts, subject and text of message. The body of email message will contain the list of scanned qr codes (data with attached image captures).

To send the email tap on Send button.

Email will be sent and a confirmation message will pop up.
